未來展望

未來展望 – 授權金&權利金

- For **Licensing revenue**, we expect continued strong growth, driven by increases in both the number of licenses and the average license price across our foundry and fabless customers.
- For **Royalties**, growth is accelerating, driven by the ramp-up of mass production across various new applications, higher ASPs from advanced nodes, additional PUF-related royalties, and higher royalty rates from MTP-related IPs.
- New application ramp-ups include:
 - Mobile: RF ICs for U.S.-based smartphone modem platforms.
 - Automotive: ADAS, networking-related applications, ISP, and LiDAR.
 - Cloud AI: BMCs, SSD controllers, networking-related applications, CXL controllers, and DIMMs.
 - Edge and Endpoint: Embedded controllers for notebooks and PCs, as well as security applications for various smart devices, including printer cartridges using embedded PUF for anti-counterfeiting.

未來展望 – 新IP技術&資安生態系擴展

IP & Security Platforms

- OTP: Advanced GAA OTP IP development with leading foundries, extending toward sub-3nm nodes.
- RRAM: Embedded RRAM platforms with key foundries and IDM for FinFET, BCD and automotive applications.
- NeoFlash: Deployment across foundries for BCD and mixed-signal processes in 12-inch fabs.
- Security IP: PUF-PQC achieves NIST FIPS 205 and SP 800-208 certification, reaching a milestone in comprehensive Post-Quantum Cryptography protection.

Security Ecosystem Expansion

- Chiplet Security: End-to-end authentication and supply-chain trust for advanced packaging.
- CPU platform collaboration: PUF-based Security Root of Trust integrated with major CPU platforms.
- Automotive & Healthcare: PUF-based HSM servers supporting secure OTA and privacy protection.

Logic NVM

Solving the Pain Points of Traditional NVM

	Traditional NVM	Logic NVM
Process Complexity	Requires 10+ additional masks. 	Standard logic process. Zero additional masks. 
Cost Efficiency	High manufacturing cost (long process). 	Low cost (streamlined production). 
Yield Rate	Lower yield (complex processing). 	High yield (standard maturity). 
Development Cycle	Long lead time. New transistor models required. 	Rapid deployment. Uses existing logic models. 
Scalability	Limited capacity. Requires new equipment. 	Highly scalable. No new equipment needed.
